

HipDyS

- This GP surgery is taking part in the **HipDyS Study**
- The **aim** of this study is to improve hip screening in babies and the identification of developmental dysplasia of the hip (DDH).
- By standardizing hip screens, we hope to **reduce missed diagnosis** and **unnecessary referrals to hospitals**.
- If **you or someone close to you has a newborn baby under 11 weeks old** and is due to have their baby check, you might be **invited** to take part in this study.
- **If you would like information** on the HipDyS Study, you can discuss further with your GP surgery at your next appointment.
